

CLASSIC SOUND, MULTI-PATTERN VERSATILITY

The sE2300 is the latest multi-pattern version of the best-selling, award-winning sE2200 condenser microphone that first put sE Electronics on the map with its smooth, polished sound for vocals, voiceovers, and numerous instrumental applications.

The cardioid version grew famous through use with **world-class vocal artists like Amy Winehouse**, and this multi-pattern version only increases its versatility, enhancing its usefulness for any instrument and reviving the spirit of the world's most classic studio microphones.

HAND-CRAFTED CAPSULE & CLASS-A CIRCUITRY

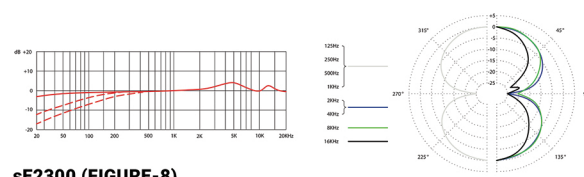

As with all of sE's condenser microphones, the sE2300's gold-sputtered capsule is **hand-crafted and hand-tuned by skilled technicians in our own factory**. This is highly unusual for mics at this price, but much like with fine musical instruments, **it simply sounds better that way**.

CLASS-A ELECTRONIC DESIGN

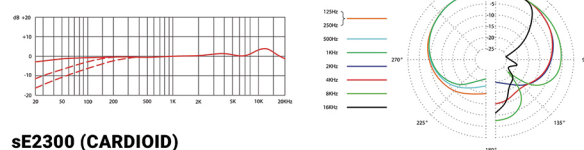

Carefully-selected, **state-of-the-art discrete components** ensure brilliant sound quality, low noise, high sensitivity & superbly consistent performance on any source.

TWO PADS, TWO LOW-CUT FILTERS

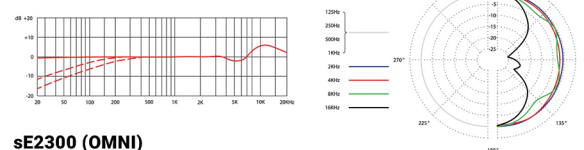

-10 dB & -20 dB pad switches provide extended dynamic range, enabling a wide variety of applications and close-mic techniques for even the loudest instruments; the **selectable 80 Hz and 160 Hz filters** help eliminate low-frequency rumble, as well as help compensate for excessive bass / proximity effect when close-micing.

CUSTOM TRANSFORMER & ACCESSORIES

In the spirit of classic studio microphones, the sE2300's custom transformer provides superb depth & weight to the overall sonic image, and the massively shielded metal housing ensures noise-free operation.

Additionally, the sE2300's **all-metal chassis** provides efficient rejection of any electrical interference and noise - and the **high-quality finish** ensures a great look for years to come.

SHOCK + POP

Each sE2300 includes sE's clever **quick-release Isolation Pack** shockmount. With the twist of a single knob, the mount attaches quickly and securely to the microphone, and is removable with the same simple motion. This allows the mic to be set up quickly and easily - no adjustments, no hassle.

The Isolation Pack also includes sE's **curved metal pop filter**, which efficiently slots in to the shockmount and is vertically adjustable for best performance.
